

# Number of Incidents per Number of Entries (%) for BSL-3 & BSL-4 Suites

Potential Biological Exposures show as subset of Total Incidents

USAMRIID had no Actual Biological Exposures for 2017, 2018, or 2019

■ Total Incidents ■ Potential Biological Exposures (PBE)

n= Total Number of Entries

USAMRIID security tracks the number of times employees enter BSL-3 and BSL-4 laboratory suites. As one indicator of our safety performance, we can look at the number of incidents compared against the total number of entries in a given time period.

A PBE means that some risk of exposure to infectious agents and/or toxins may have occurred, resulting in placement of the personnel involved on precautionary medical surveillance. In each of these cases during 2017, 2018, and 2019, no illness or disease occurred.
